

Control panel with LCD display:

The machine is controlled by a membrane touch panel with a back-lit LCD display featuring the settings, battery life & diagnostic information.

Optional accessories:

Fast charger: Charges the machine in 4 hours (standard charger takes 20 hours). It can also be plugged in while you are playing with the machine to provide unlimited play time.

Cover: This water resistant cover will protect the machine from dust, debris, leaves, etc. The machine can still be wheeled while covered.

Carry case: This water resistant heavy duty carry case has handles for easy carrying and pockets for accessories like the remote & charger. The machine can be wheeled while covered.

Cover

Carry Case

FEATURES

- Top speed 80mph / 130km/h
- Lowest speed 20mph / 32km/h
- Extreme topspin & slice
- Ball intervals from 2 to 15 seconds
- Horizontal oscillation (wide & medium)
- Vertical oscillation
- Random triple oscillation
- Up to 8 hours battery life
- 200 ball capacity
- Weighs 50lbs / 24kgs
- Remote control included
- 2 line drill (wide, medium & narrow)
- Heavy duty battery
- 3 year warranty

PRO 2

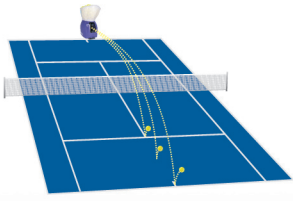

Horizontal Oscillation - Wide

Balls are randomly fired horizontally within the full width of the singles court at a consistent depth chosen by the user.

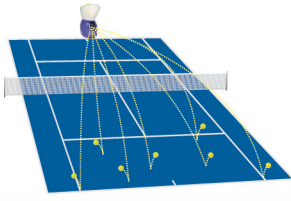

Horizontal Oscillation - Medium

Balls are randomly fired horizontally within a medium width of the court (easier than the wide version). The depth selected by the user remains consistent during this drill.

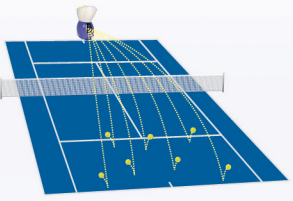

Vertical Oscillation

Balls are randomly fired at different elevation levels providing a range of depths for each shot.

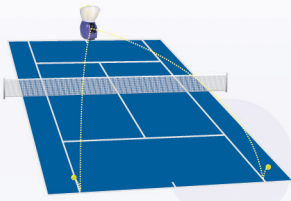

Vertical & Horizontal Oscillation - Wide

This drill combines vertical and horizontal oscillation at the same time, providing balls randomly at varying depths and widths throughout the singles court.

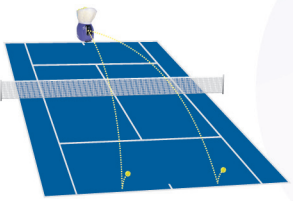

Vertical & Horizontal Oscillation - Medium

A combination of the vertical and horizontal (medium) oscillations firing balls at random depths but only through a medium width of the court.

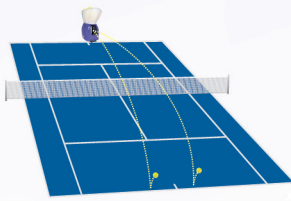

Two Line Drill - Wide

Alternating forehands and backhands with the maximum lateral movement required within the singles court. This drill tests a player's footwork, speed and endurance.

Two Line Drill - Medium

Alternating forehands and backhands through a medium width of the court challenging both a player's endurance and technique.

Two Line Drill - Narrow

Alternating forehands and backhands with minimal movement required, allowing the player to work on footwork and grip changes without causing too much fatigue.

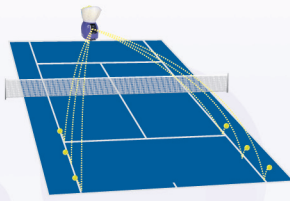

The Spinfire Pro 2 offers all of the features that are most demanded by serious tennis enthusiasts. It includes both horizontal and vertical oscillation, a 2 line drill, extreme spin, LCD display, membrane touch panel and more. Its stylish design allows for a 200 ball capacity while remaining portable and compact for easy storage.

Internal oscillation:

Internal oscillation is disguised and moves quickly making shots less predictable.

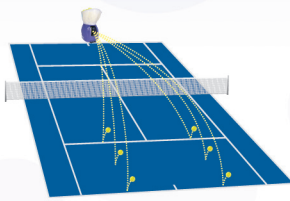

Remote control:

The 9 function remote control allows you to alter the settings without having to return to the machine. It also has a "pause" button which conserves battery life by powering down the machine into a sleep mode while you collect the balls.

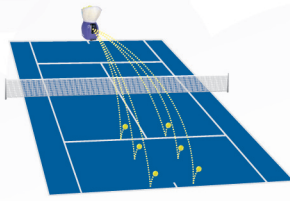

Two Line Drill with Vertical Oscillation - Wide

Alternating forehands and backhands set at the full width of the singles court with random variation in depth. This is the ultimate test of endurance, footwork and technique.

Two Line Drill with Vertical Oscillation - Medium

Alternating forehands and backhands at random depths through a medium width of the court, providing a solid challenge to a player's footwork, technique and aggressive play.

Two Line Drill with Vertical Oscillation - Narrow

Alternating forehands and backhands at randomly varying depths, testing the player's footwork, grip changes and ability to "put away" the short balls.

Counter rotating wheels:

Counter rotating wheels are the most silent and effective method of ball propulsion. This design combined with Spinfire's "extreme grip" throwing wheels allows for maximum topspin and slice.

Vertical & horizontal oscillation:

Vertical and horizontal oscillation provides shots with variation in depth and width (wide or medium) respectively. These features can be turned on individually or together, providing completely random oscillation.

Extreme spin:

Spinfire's "extreme grip" throwing wheels can provide very heavy topspin & slice. Of course you can always set the spin to much easier levels for more realistic practice.

Portability:

The collapsible hopper, stowaway handle and solid travel wheels make moving the machine a breeze.

Calibration:

Utilising infrared sensors, the machine continuously calibrates itself during play.

Two line drill:

This drill will provide alternating forehands and backhands. It can be set to either "narrow", "medium" or "wide" to vary the degree of difficulty. You can also set the timing between each ball.

Memory:

Each time you turn on the machine it recalls the last settings you were using for interval, speed and spin.

Warranty:

3 year warranty on parts and labour.
